

Limbic System

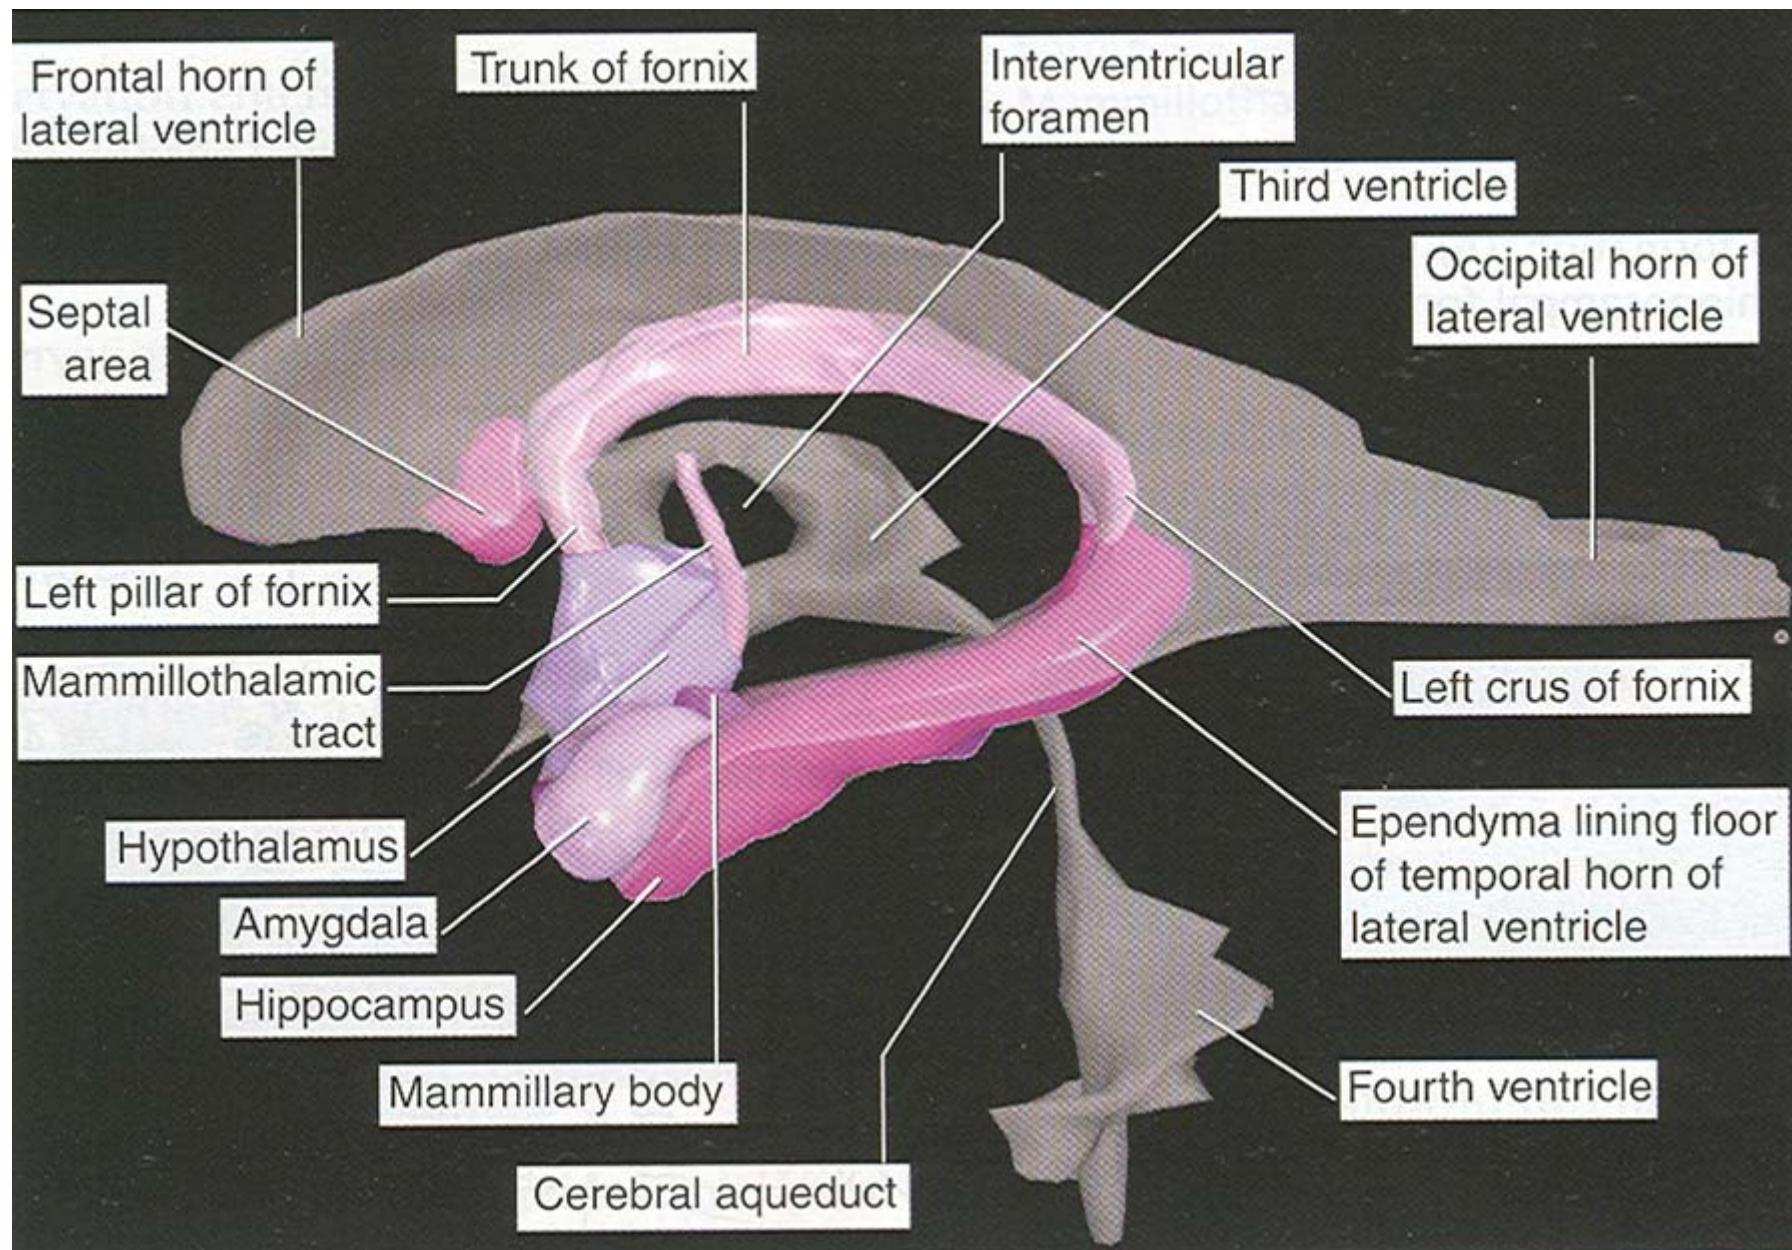

Limbic System

Parts of cortical , sub-cortical structures forming ring around upper end of brain stem

Plays vital role in

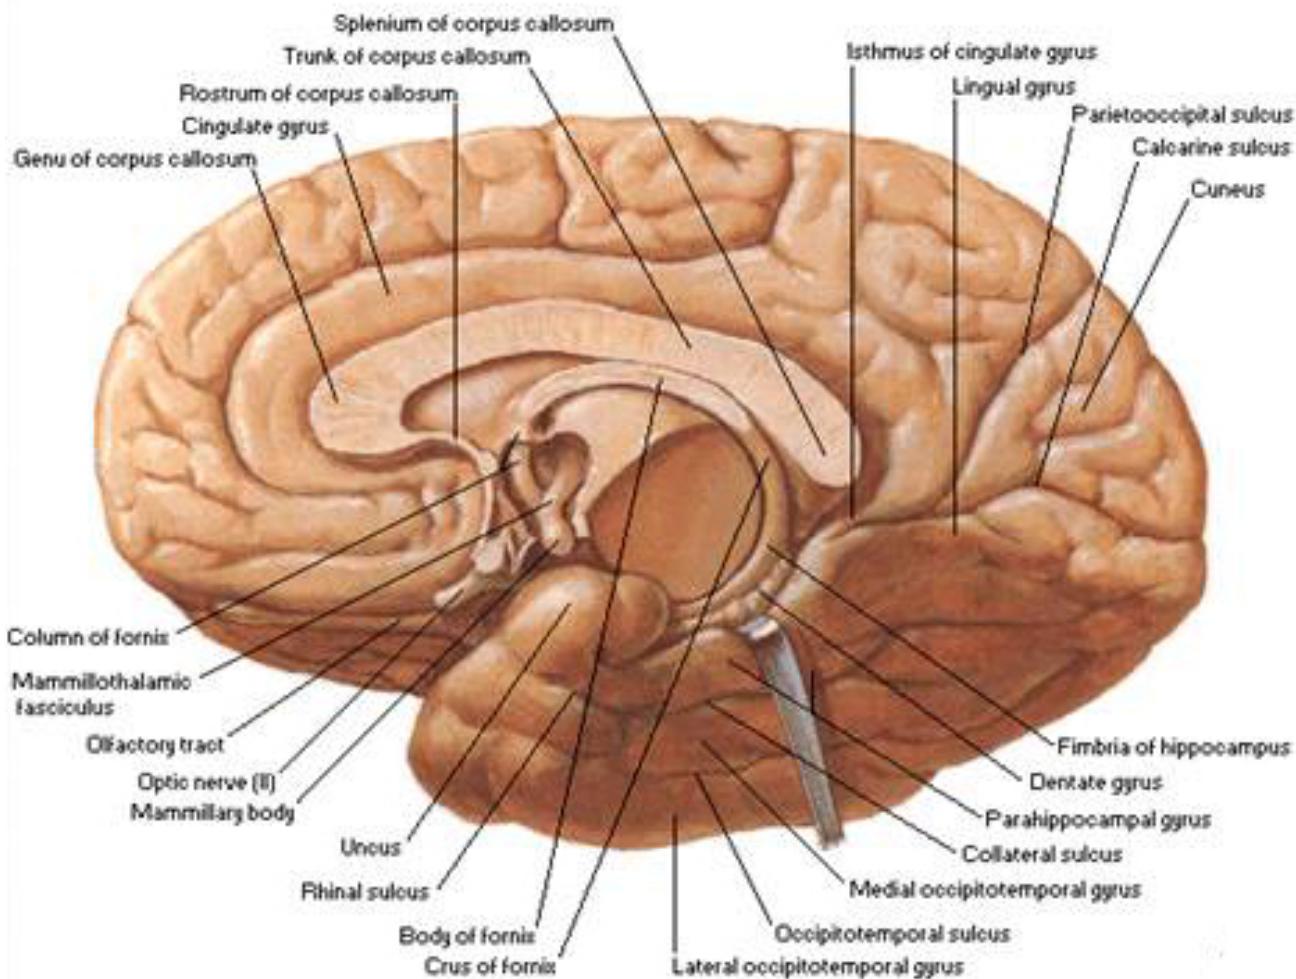

- Emotions
- Behaviour
- Drive-
- Memory

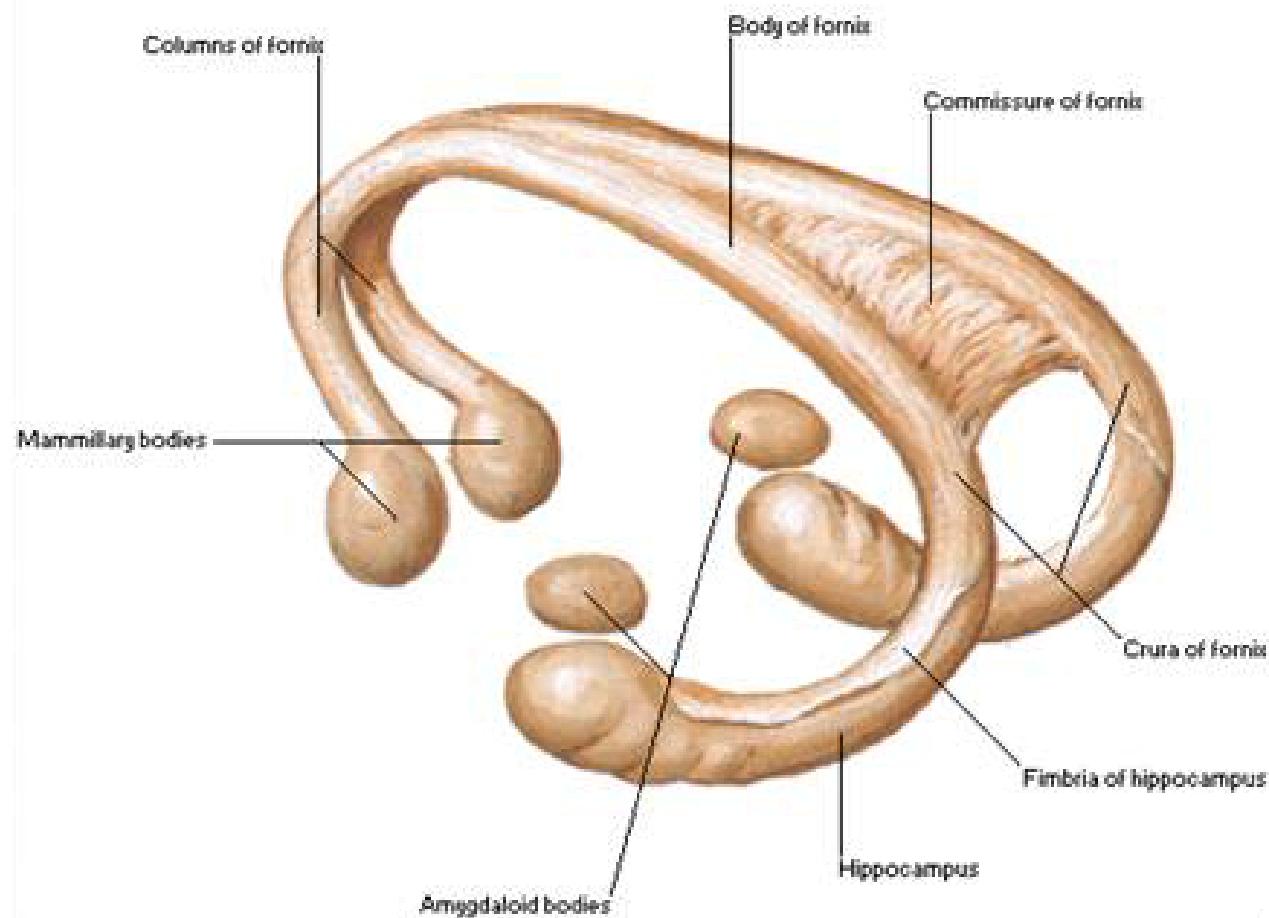

Cerebrum - Hemisphere with Brainstem Excised

Medial View

Hippocampus and Fornix

Schema of Fornix

Limbic System

Three main components

- Cortical structures
- Sub-cortical nuclei
- Fibre bundles

Limbic System

Cortical structures

Limbic lobe-

- Cingulate gyrus
- Isthmus
- Parahippocampal gyrus
- Uncus (ento rhinal cortex)

Hippocampal formation

- Hippocampus
- Dentate gyrus
- Indusium griseum

Limbic System

Subcortical nuclei

- Amygdaloid nuclear complex – somatic response to internal needs , fear , drive/instincts (smell mediated sexual behaviour)
- Septal region & nuclei (pleasure zone)
- Olfactory areas (olfactory nerve, tract , stria)
- Hypothalamus esp. mammillary bodies
- Anterior nucleus of thalamus

Limbic System

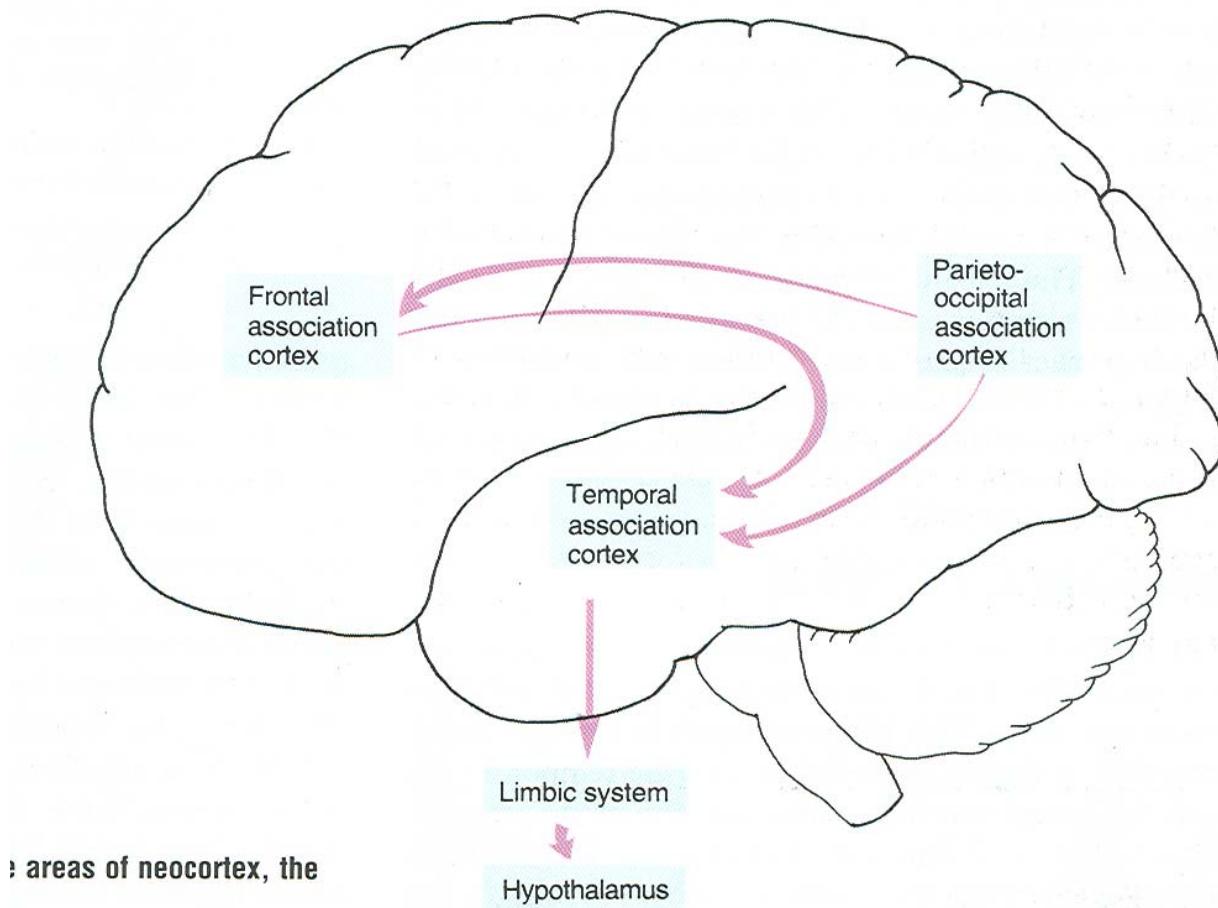

Fibre bundles

- Fornix
- Mammillothalamic tract
- Stria medullaris thalami
- Stria terminalis
- Anterior commissure
- Cingulum
- Diagonal band (broca)

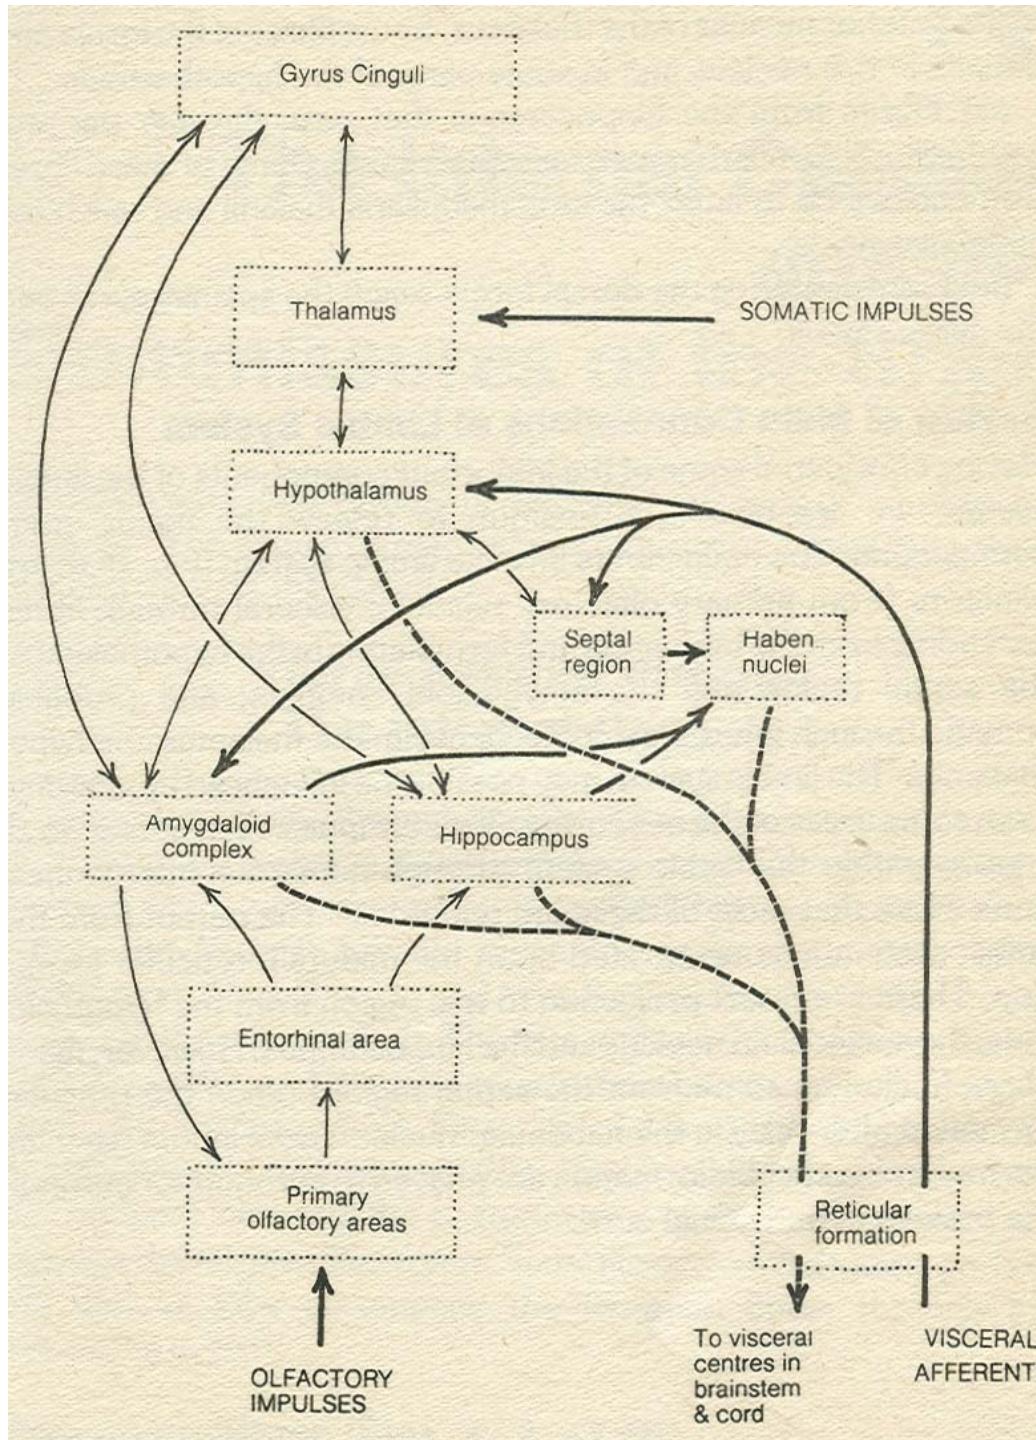

Limbic System

Functions

- Integration of olfactory, visceral and somatic impulses
- Hunger, food and eating behaviour
- Sexual behaviour
- Emotional behaviour (cingulate gyrus)
- Recent memory (hippocampus)
- Perception of fear (amygdaloid)
- Drug dependence (septal nucleus)

Vision
Hearing
Touch

Main Inputs

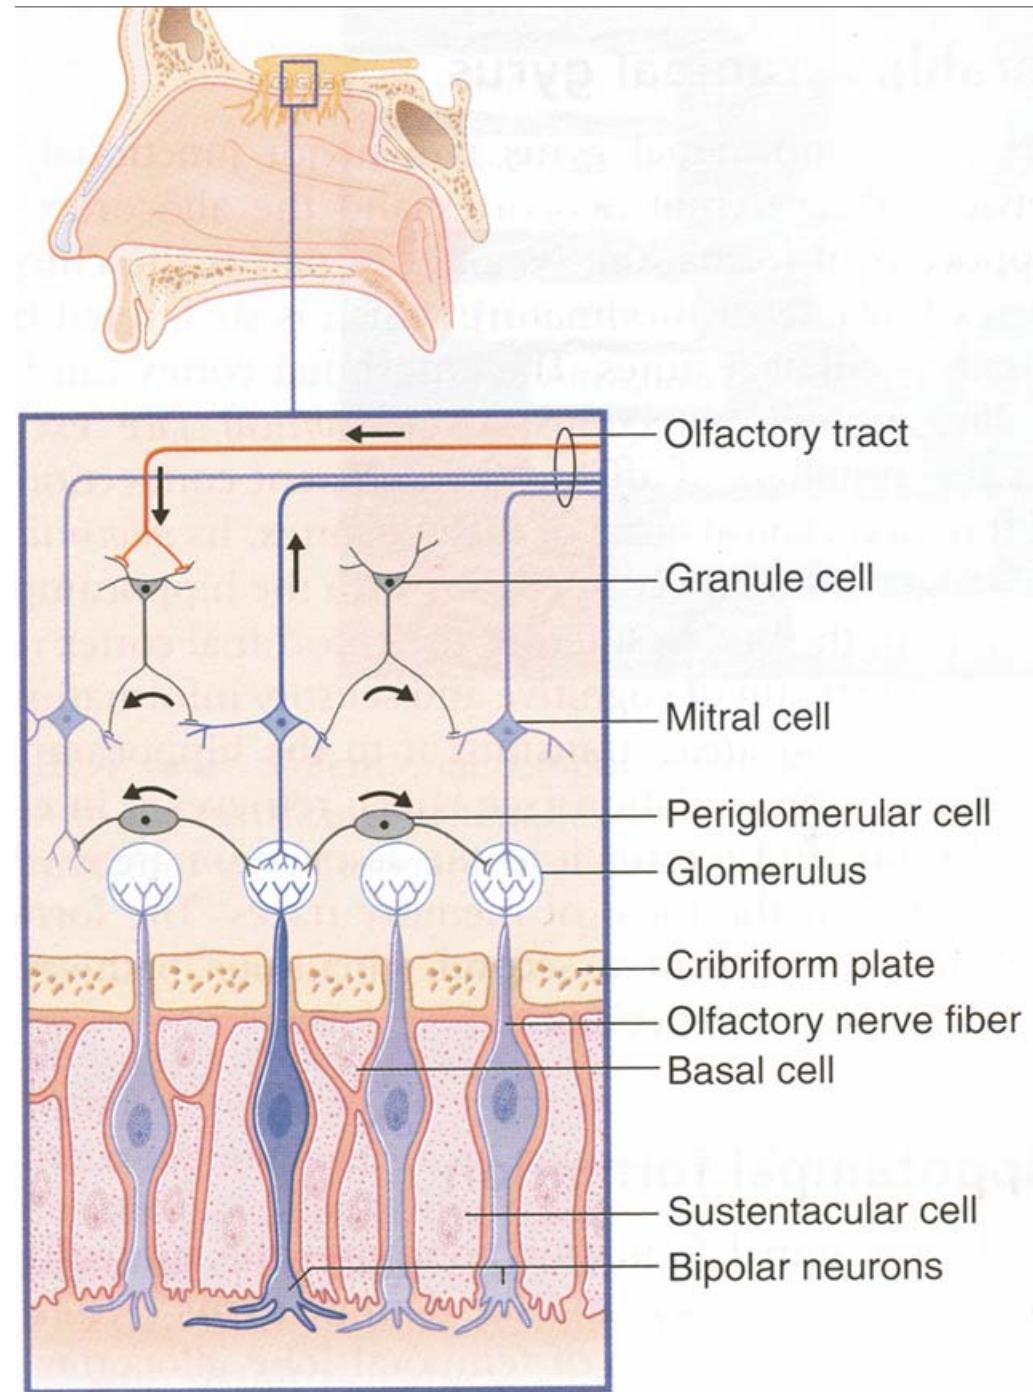

- Olfactory
- Visceral
- Somatic

Output
Midbrain
Reticular formation

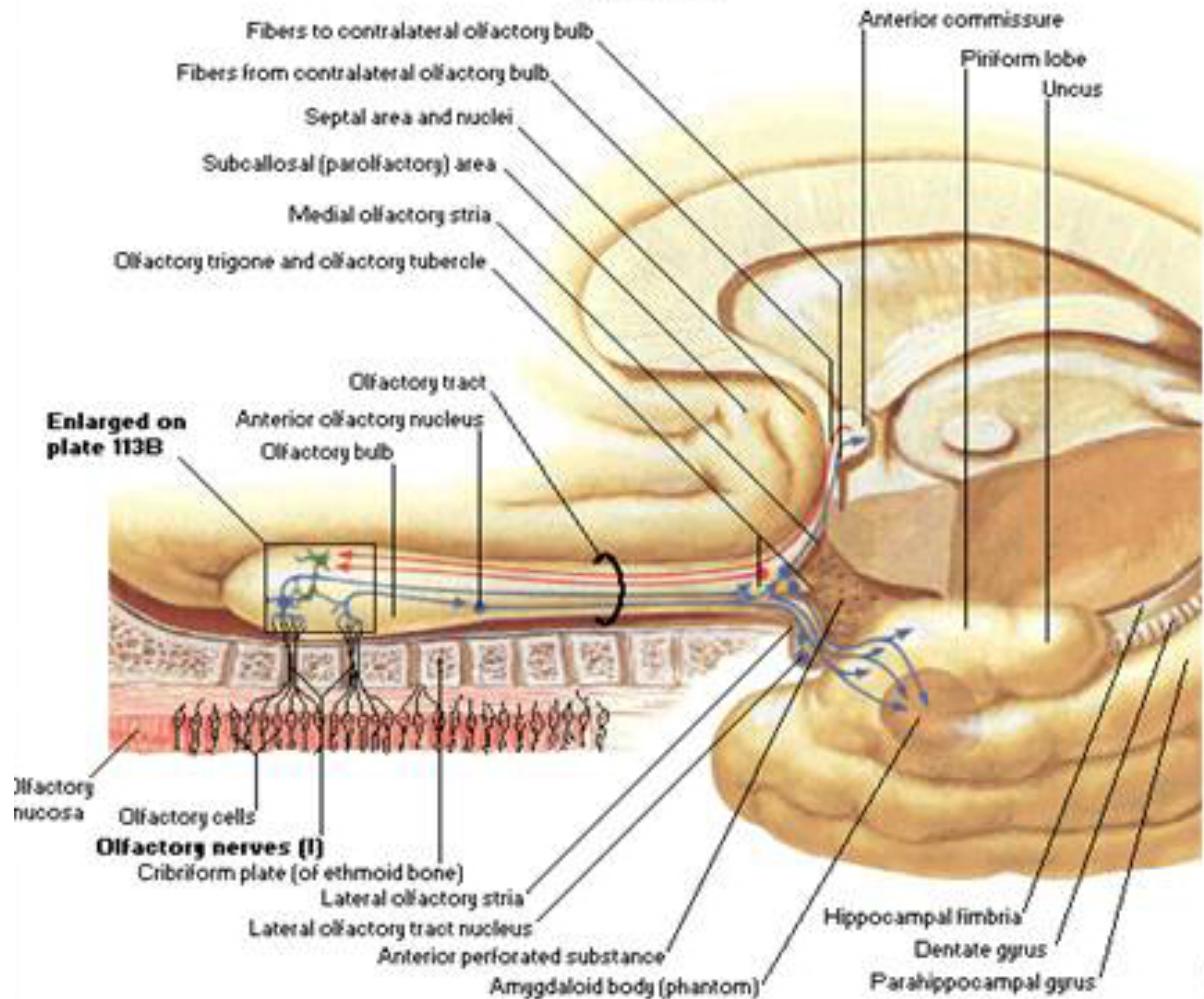

↓
Autonomic centers in
Brain stem & spinal cord

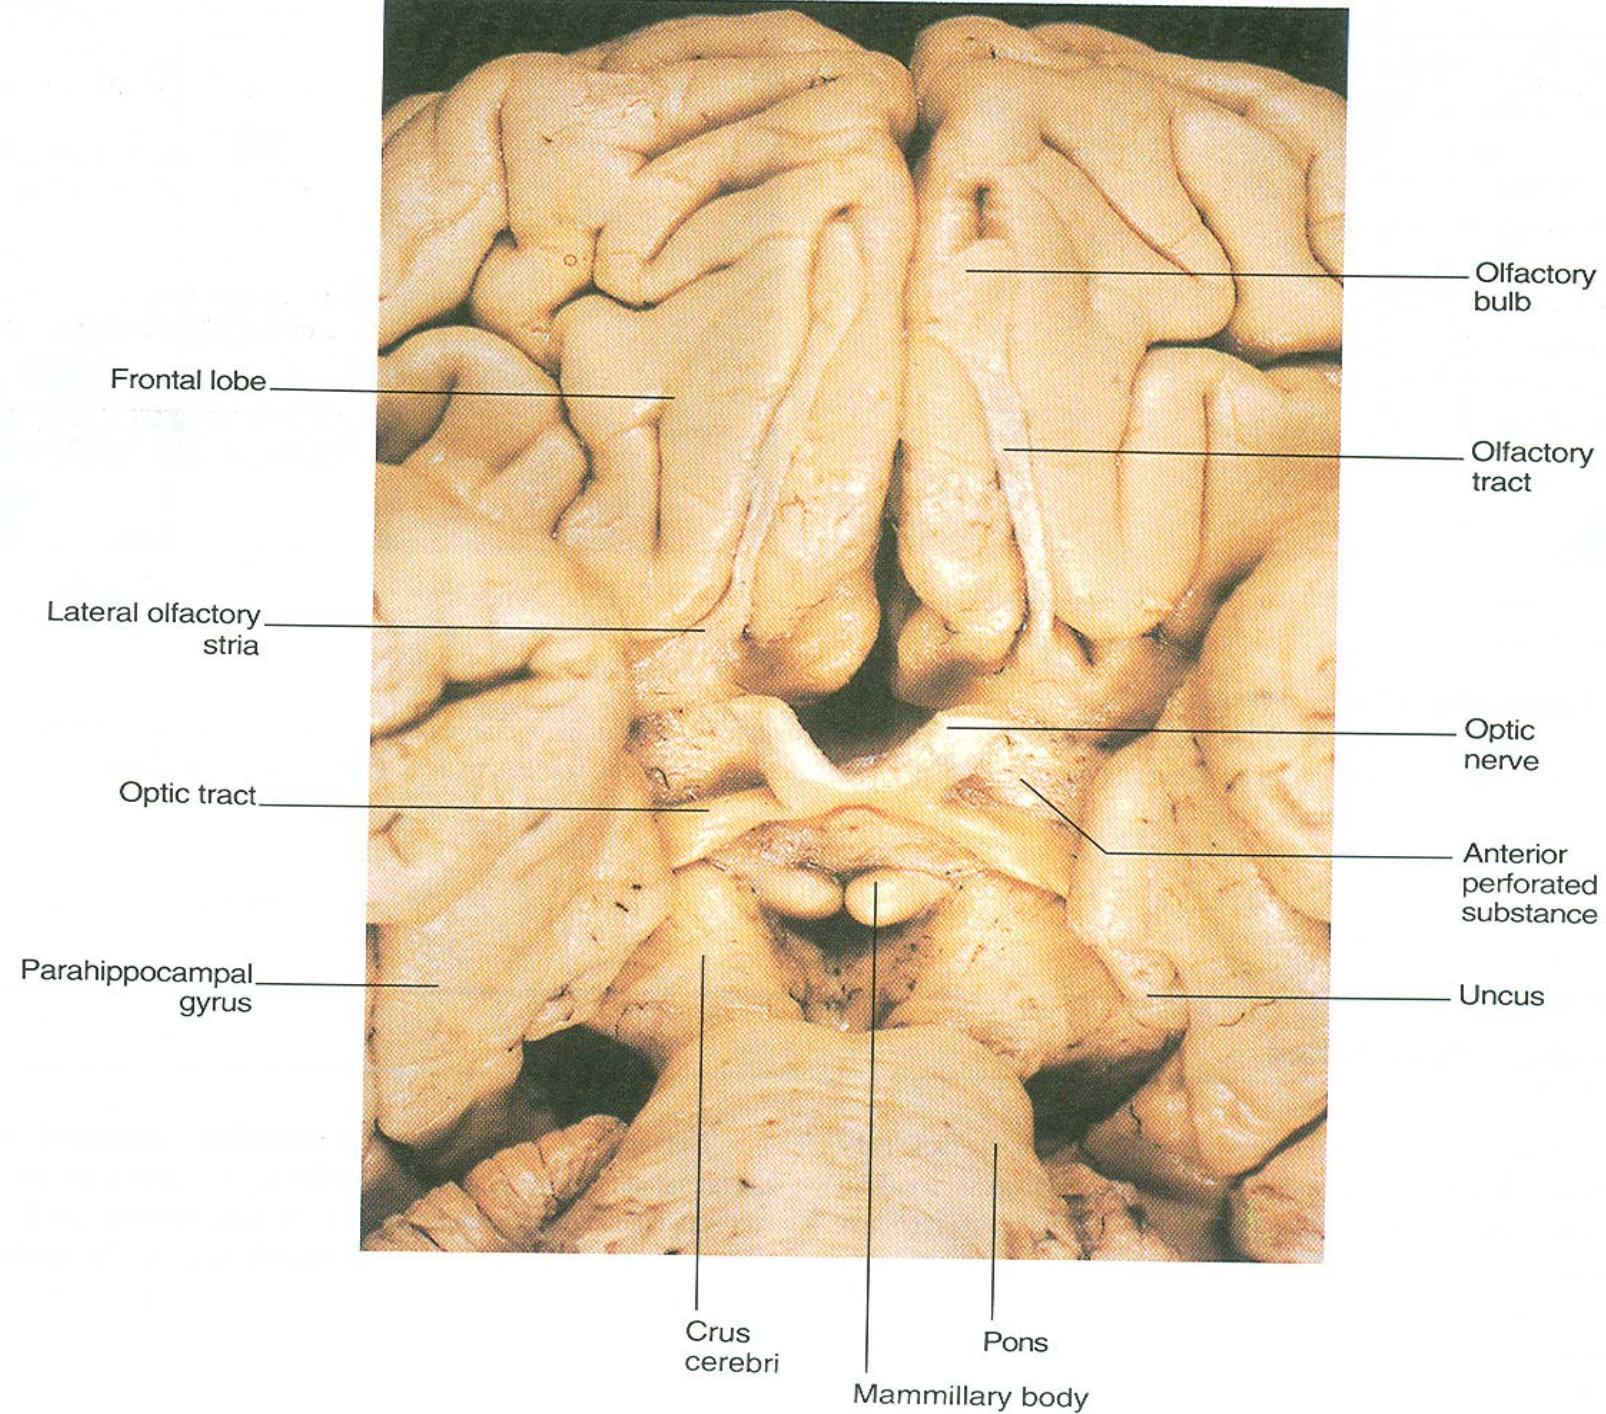

OLFACTORY SYSTEM

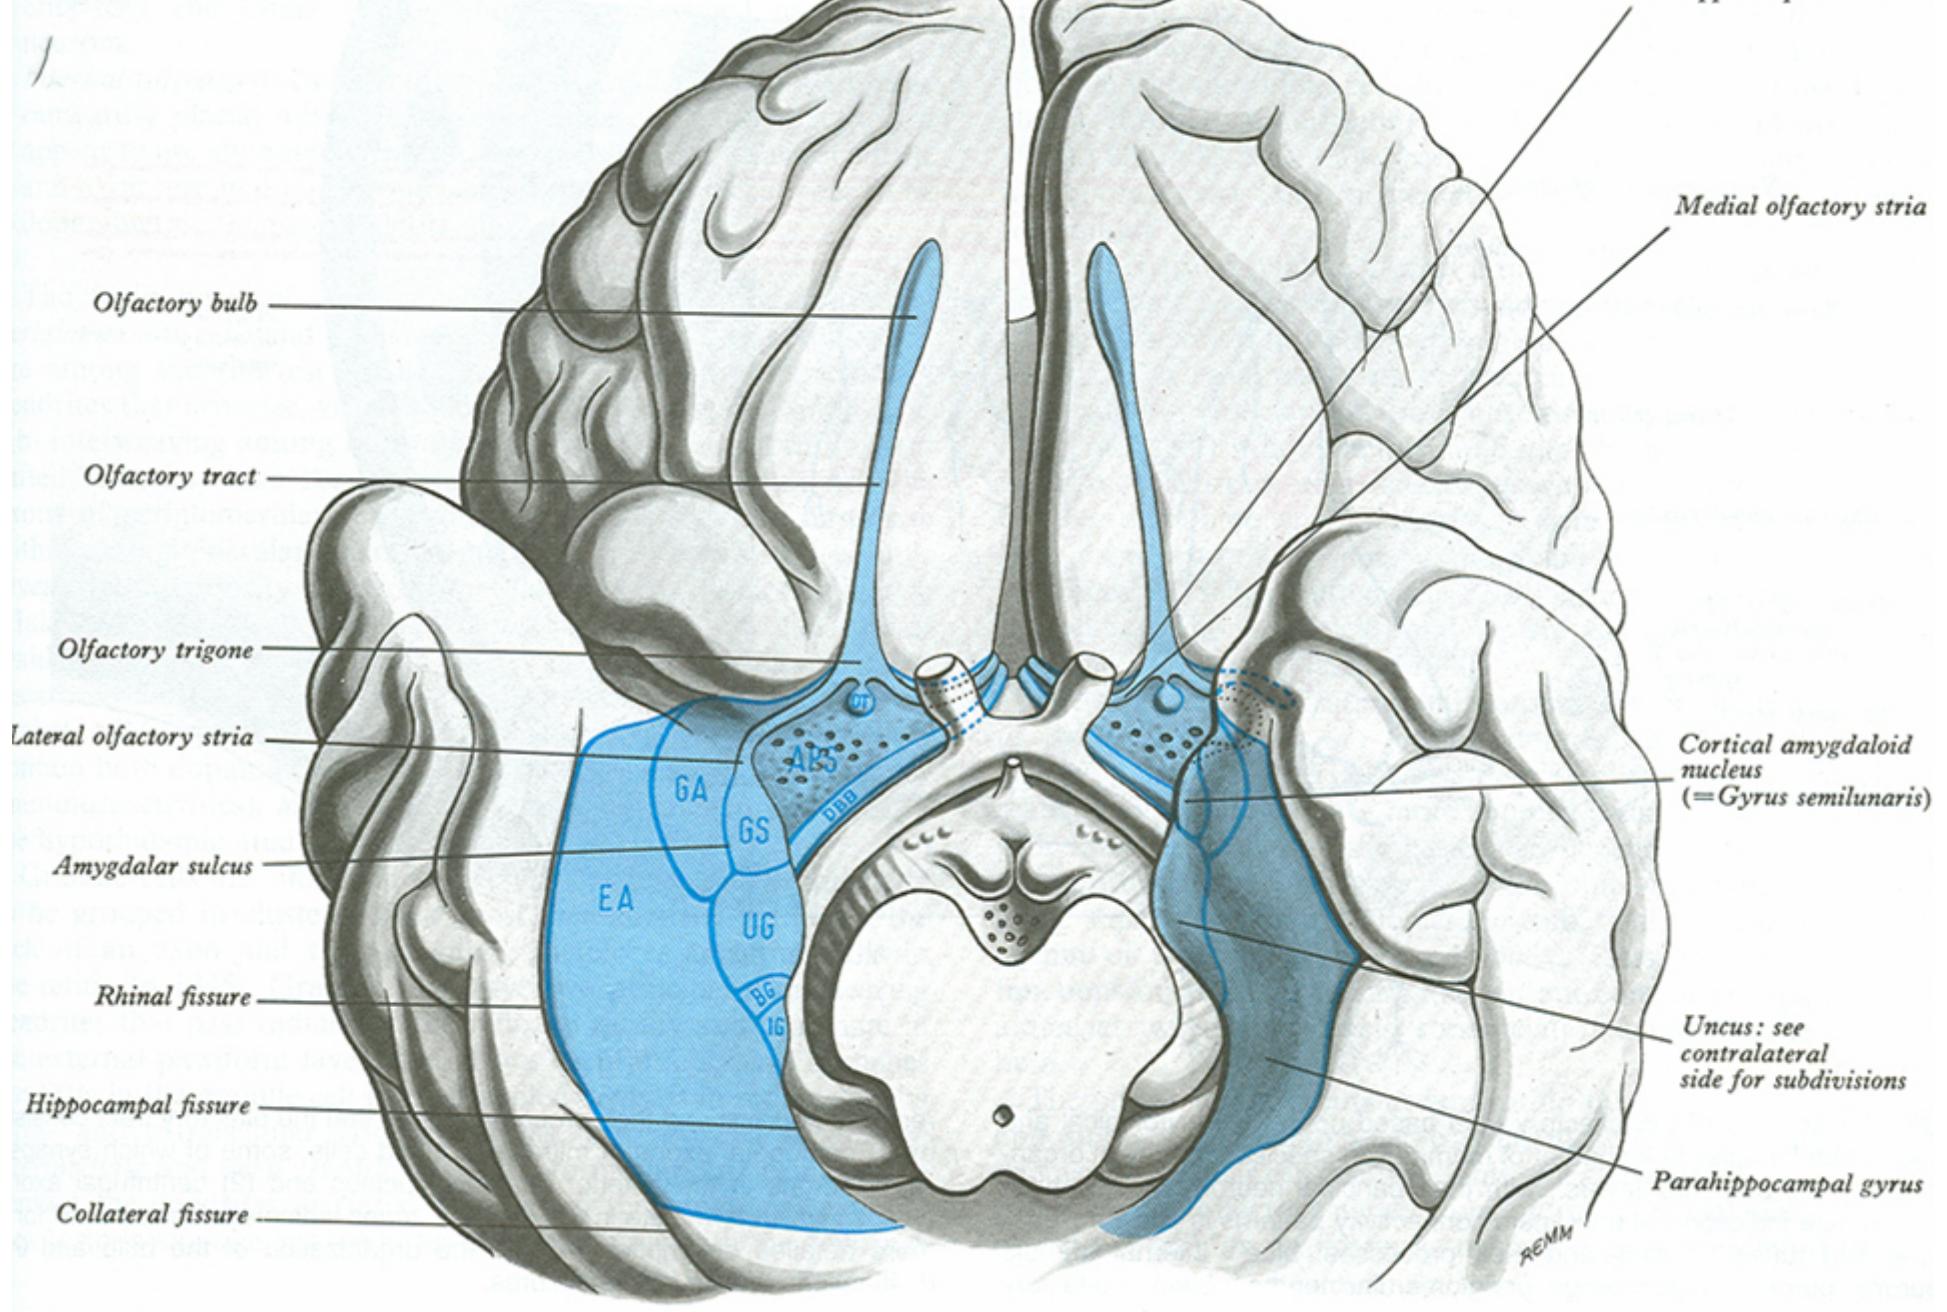

1. Cell bodies are located in surface epithelium.
2. Axons of primary afferents enter cerebral cortex directly.
3. Primary neurons are replaced continuously.
4. Olfactory pathway is ipsilateral.

Olfactory Nerve Schema

Medial stria

Paraterminal gyrus

- Lateral stria

Continue with gyrus
semilunaris(cortico-
median – Amygdaloid
body)

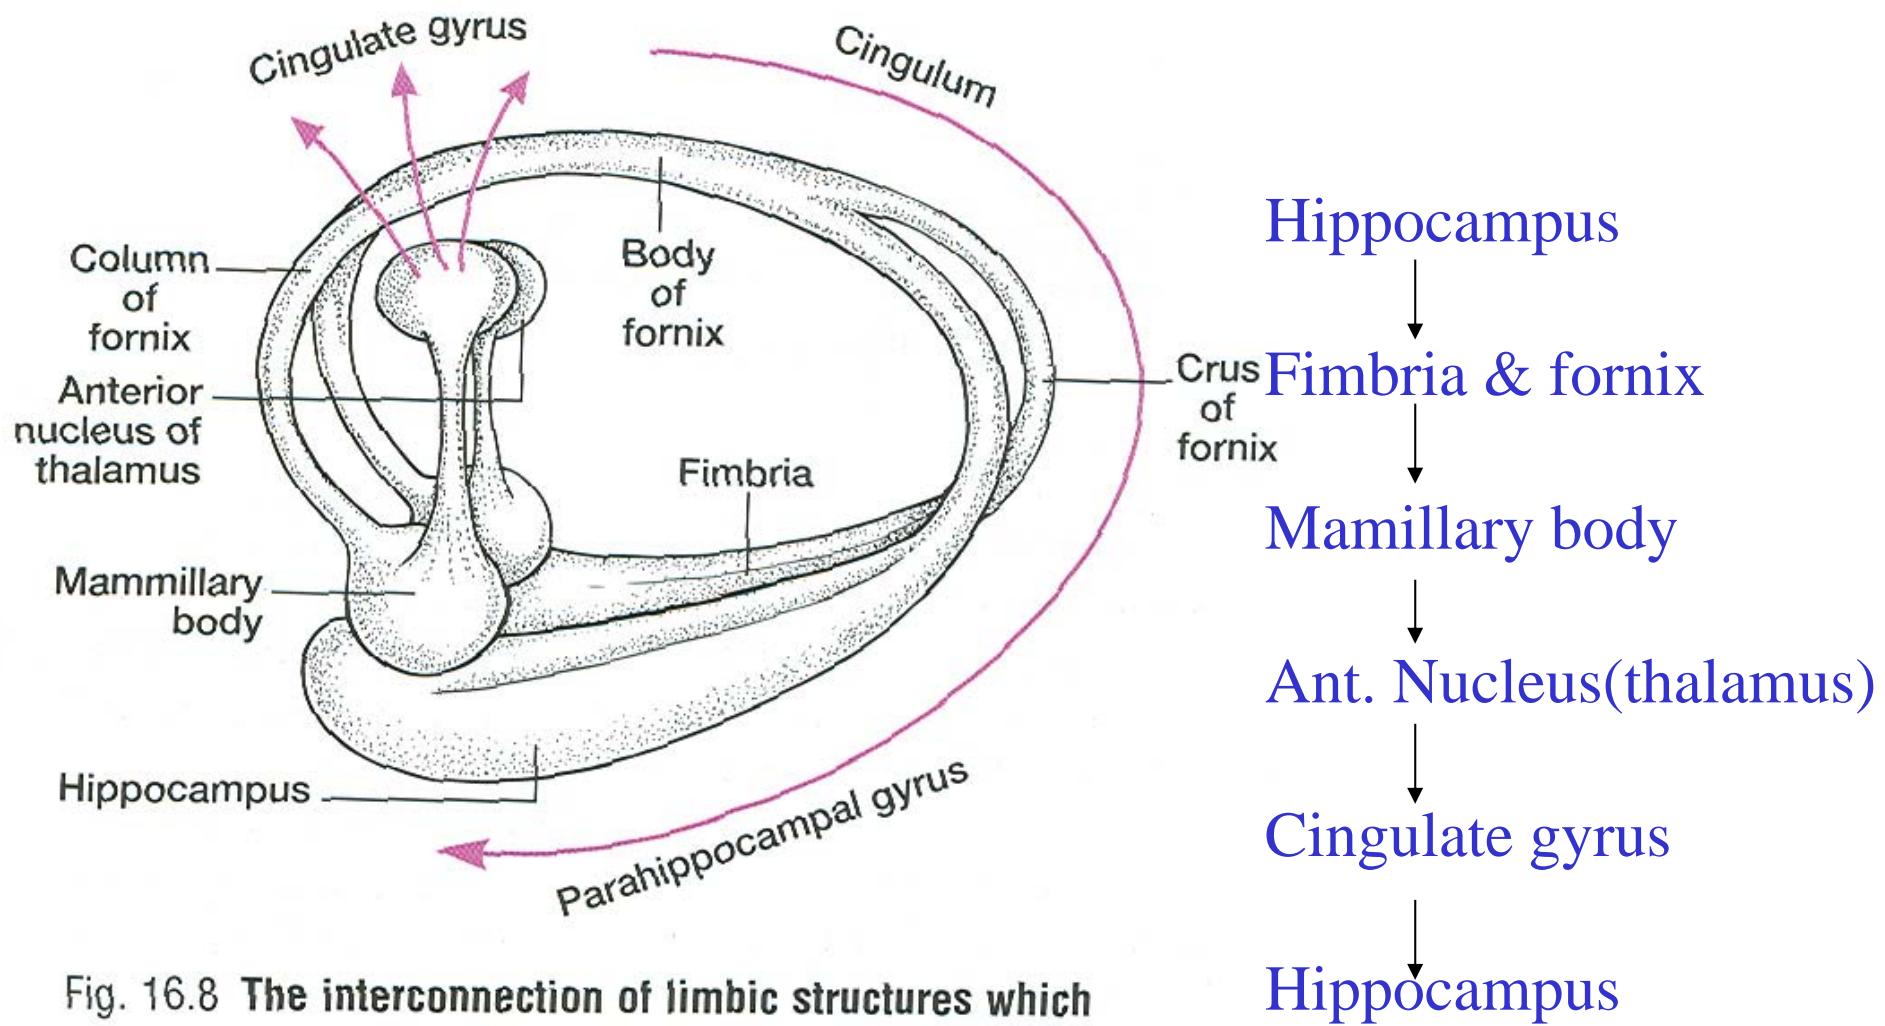

- Pyriform lobe(uncus
& ant. Part of
parahippocampal
gyrus

- Primary olfactory
cortex

Papez Circuit – for emotional integration & recent memory

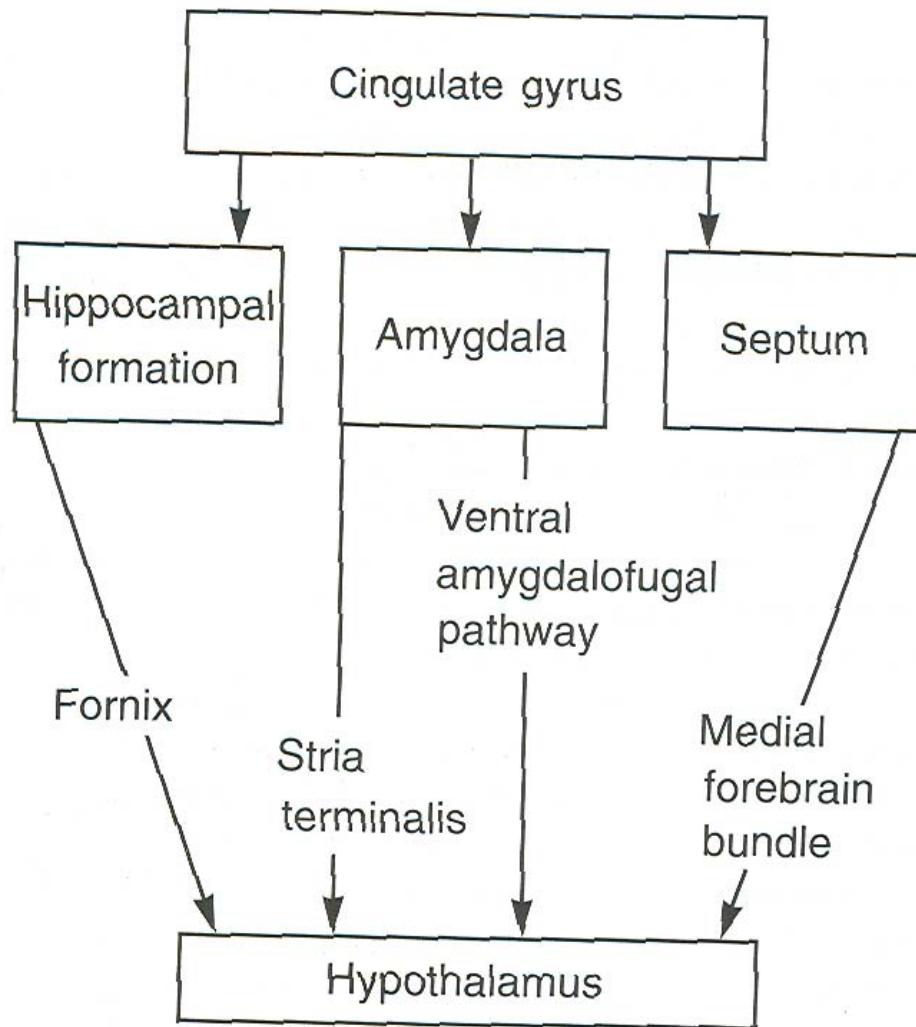

Fig. 16.4 The principal parts of the limbic system and their relationship with the hypothalamus.

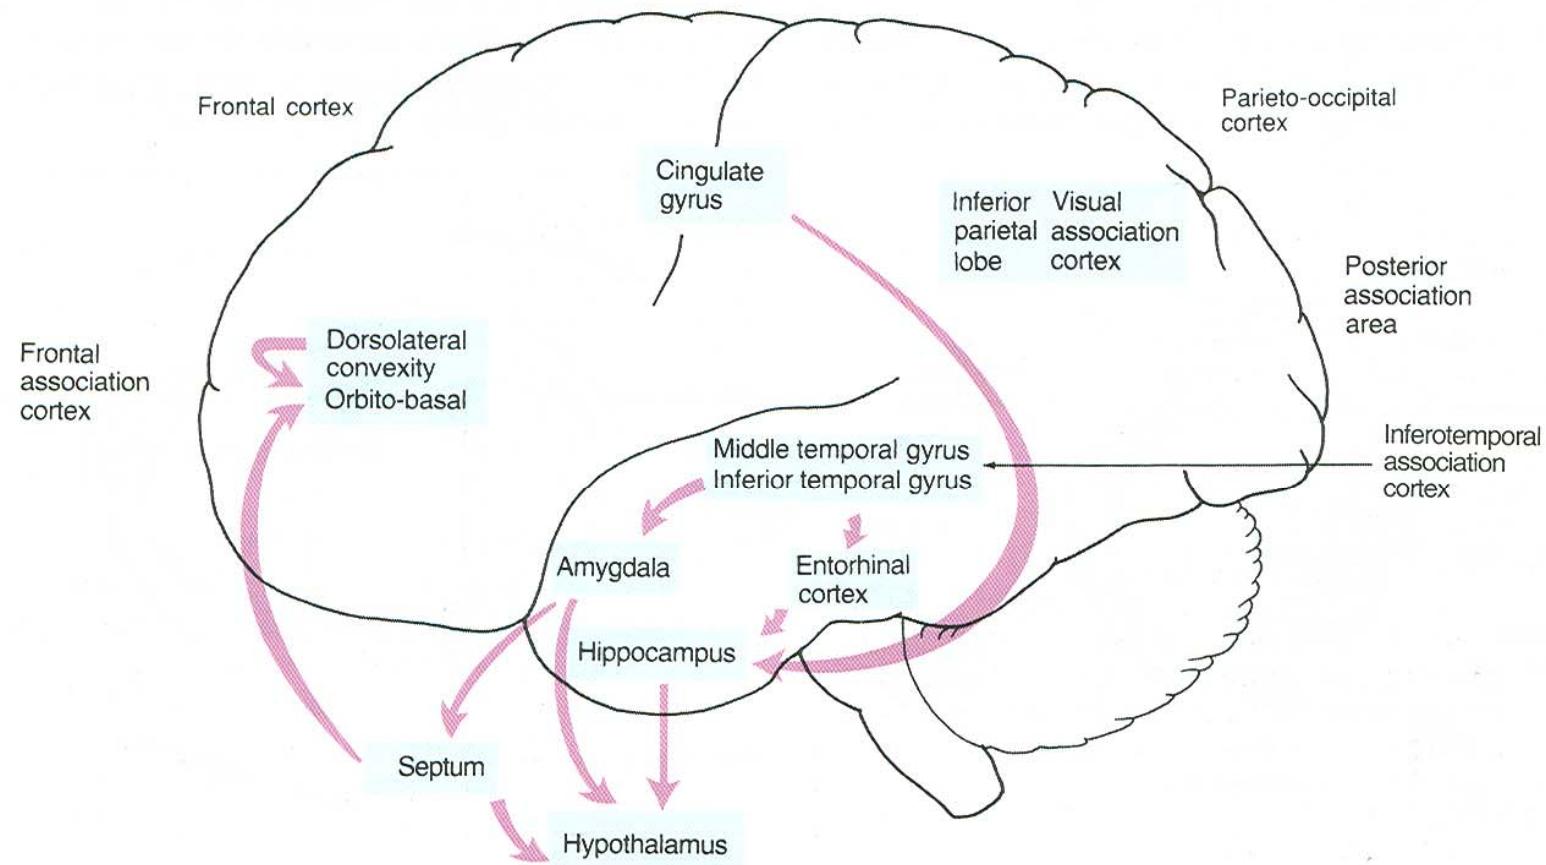

Fig. 16.6 The interconnections between associative neocortical regions and the component parts of the limbic system.

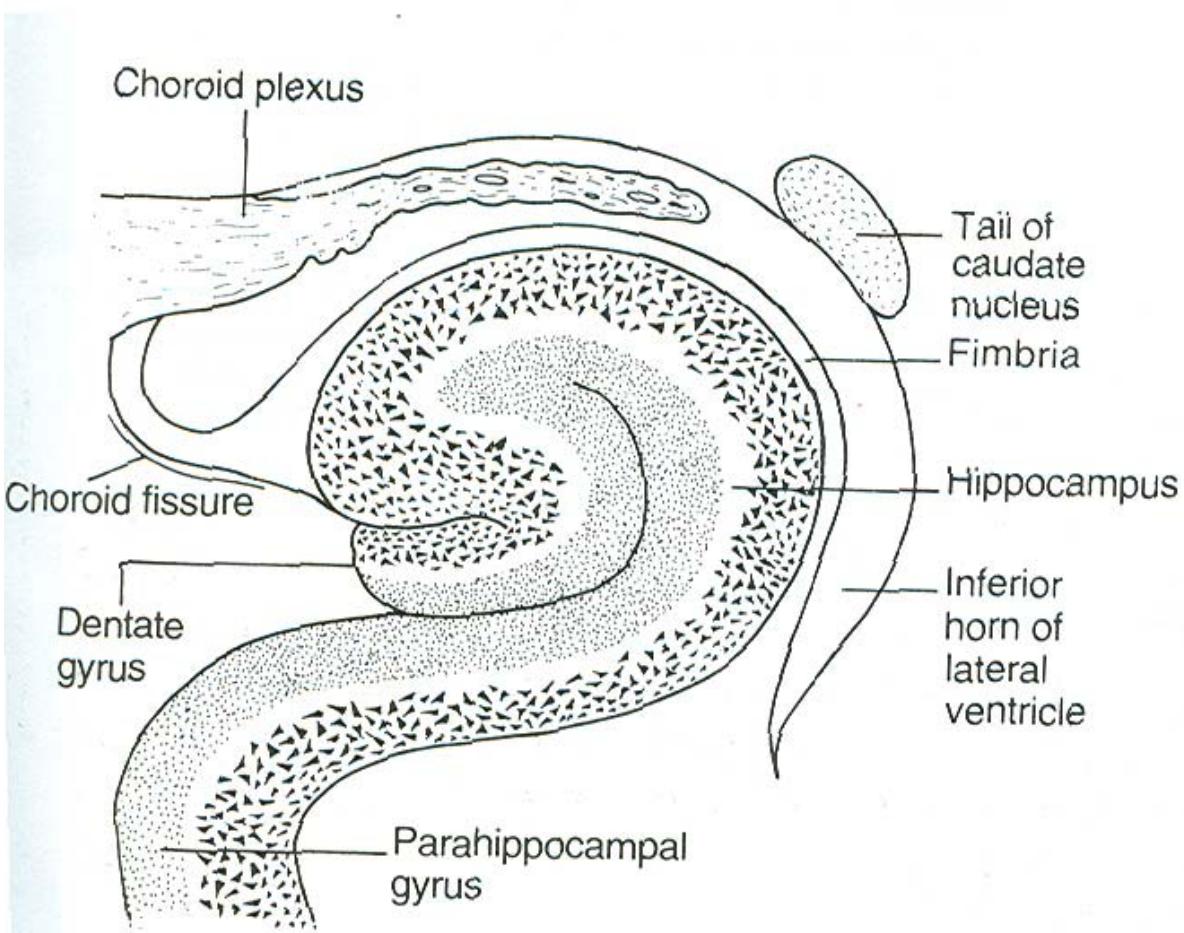

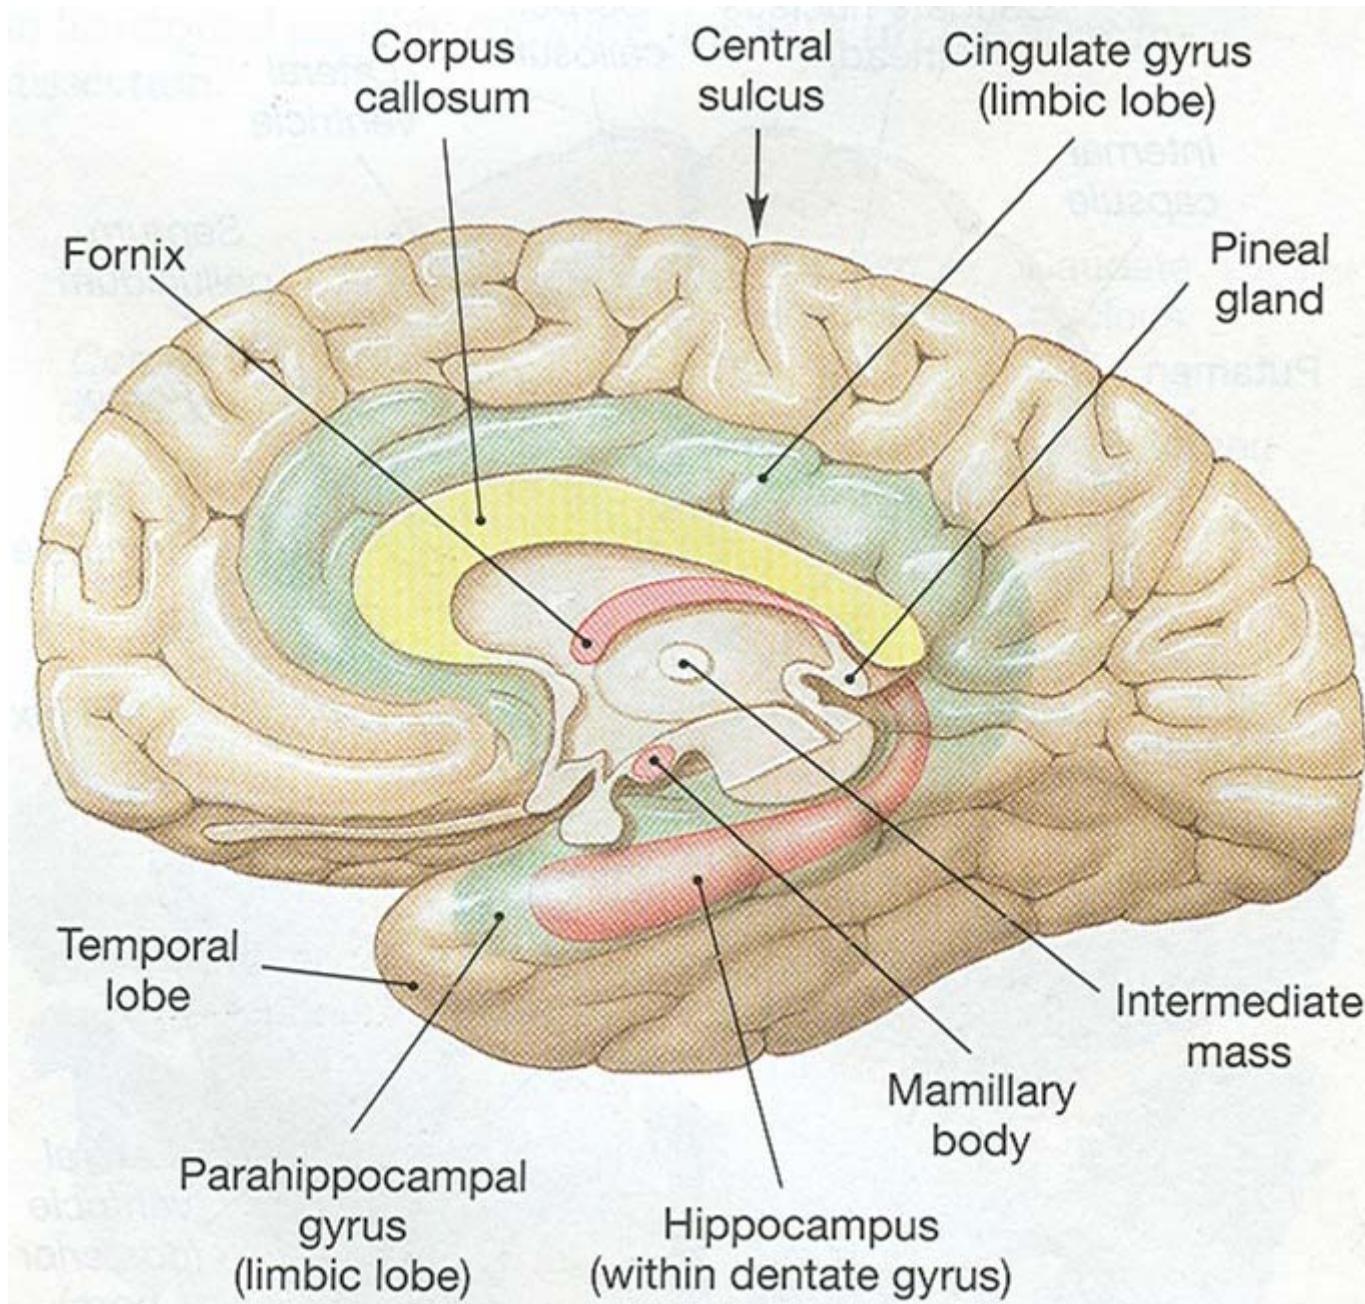

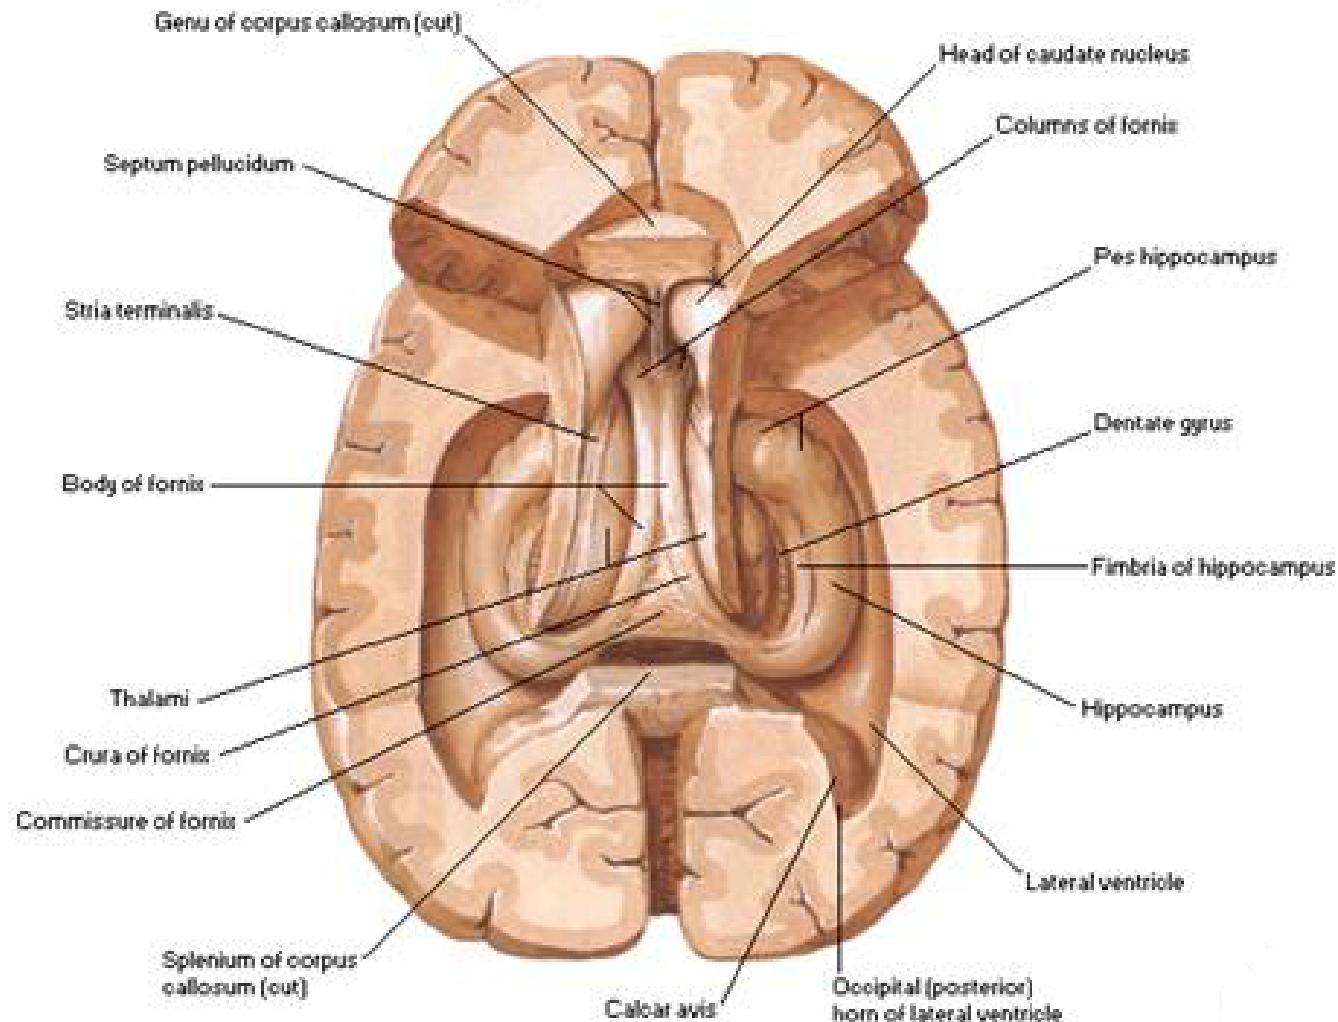

Fig. 16.7 Transverse section through the hippocampus and inferior horn of the lateral ventricle.

Hippocampus and Fornix

Superior Dissection
